The Equity Sensitivity Construct is useful to understanding equity theory and individual behavior. However, the three categories of equity sensitivity do not account for all individual differences in preferences and behavior. Individuals might show different equity sensitivities in different contexts (Huseman, et. al., 1987).

Team effectiveness is often explained on the basis of input-process-output (IPO) models. According to these models a relationship between organizational culture (input = I), interprofessional teamwork (process = P) and job satisfaction (output = O) is postulated. The aim of this study was to examine the relationship between these three aspects using structural analysis.
